COMPANY INFORMATION

We have been working on the IDOMIO Smart Home system since 2016. At the beginning, Dániel Varga and I, Ádám Csernóczki, started to think about what could be improved on the existing smart devices. The ideas were followed by deeds, so we set up our joint venture as well.

- 2017 — We reached the finals within the MVM Edison program
- 2018 — We won a GINOP tender

At first, we started the development from our own resources, then we applied to the MVM Edison program, where we received a cash prize. In 2019, we managed to win a tender, with the help of which we finally managed to put our idea into a tangible form.
